

Mattias Gonday

PERSONAL SUMMARY

I am a holder of a bachelor degree in electrical engineering from the Royal Institute of technology. Since i finished my studies in 2008 I have been working as a software designer at Ericsson AB. My work has been a mixture of designing, testing and scrum mastering. Most of my work experience has been designing embedded systems in the C language. My last year at work before returning to school was made up of a lot of Java coding even though I believe my C skills are sharper. I have also been working as an scrummaster for my team at work, but left my duties as such when I started studying.

SWOT

I believe my strengths lay in designing code and team leading, that's what I have been doing most of my professional career and successfully. My weaknesses lay in writing reports which I hate doing and therefore always procrastinate and get stressed doing until the final bell. I would like to work with some form of software developing driven project and with people that are also software developing driven to make the learning experience even greater. I do not have the greatest foundation in networking except this last year at KTH, so I would like to work with people that have more experience than me in order to gain knowledge.
